I am interested in both statistical and deep learning models of molecular biology. My Ph.D. research focuses on cancer mutational signatures, which model underlying mutational processes with latent factor models, and I produce publicly available software to encourage the reproducibility and usability of my work. In my next role, I aim to expand further into deep learning and biologically informed modeling with applications to cancer or immune genomics.

Research interests

Bayesian Modeling: Bayesian factor modeling, Gibbs sampling, semi-supervised learning with informative priors, biologically-motivated models

Deep Learning: graph neural networks (GNNs) as informative priors, deep algorithm unfolding, deep representation learning

Cancer and Immune Genomics: cancer mutational signatures analysis, liquid biopsy and fragmentomics for cancer detection, Immune receptor sequencing, T cell repertoire modeling, integration of clinical and omics data

Education

Harvard Graduate School of Arts and Sciences Cambridge, MA

PhD in **Biostatistics** (Masters awarded May 2022) August 2020 – May 2025

Advisor: Giovanni Parmigiani

GPA: 3.95

Selected coursework

- Computer Science and Data Science: Computational Biology and Bioinformatics, Cancer Genome Data Science, Deep Learning in NLP, Data Structures and Algorithms, Decision Theory
- Statistics: Bayesian Statistics and Computation, Probability Theory, Inference, Linear Models, Unsupervised Learning, Statistical Genetics, Causal Inference

California Polytechnic State University, SLO San Luis Obispo, CA

BS in **Statistics**, minor in **Data Science** September 2016 – June 2020

Mentors: Hunter Glanz, Prince Afriye, Brian Granger

GPA: 3.95

Selected coursework

- Computer Science and Data Science: Distributed Computing, Object Oriented Programming, Machine Learning and Data Science, Database Systems, Ethics in Technology
- Math and Statistics: Multivariate Statistics, Survival Analysis, Calculus, Linear Algebra, Methods of Proof in Mathematics
- Biology: Human Genetics, Cell and Molecular Biology

Skills

Mathematics and Statistics: Probability Theory, Inference, Regression, Bayesian Methods and Computation, Representation Learning, Statistical Genetics, Machine Learning

Machine Learning and Deep Learning: Model-Based Deep Learning, Deep Algorithm Unrolling, Autoencoders, RNN, LSTM, CNN, GAN

Programming: Object-Oriented and Functional Programming, Data Manipulation (Pandas, tidyverse), Simulation, Databases, APIs, Machine Learning (PyTorch, Scikit-Learn, R), Visualization (matplotlib, ggplot, RShiny), Cluster Resources, Bash, Software Development, Git/GitHub, Docker, AWS, Single Cell Analysis (Cell Ranger, scanpy, scirpy, anndata, muon)

Languages: Python, R, Java, JavaScript (TypeScript, React), MongoDB, Hadoop, PySpark, SQL (JDBC), SAS, Stata

Publications & Preprints

Landy, J.M., Zorzetto, D., De Vito, R., and Parmigiani, G. (2025). *Causal Inference for Latent Outcomes Learned with Factor Models*. arXiv preprint [arXiv:2506.20549](https://arxiv.org/abs/2506.20549).

Open source software causalLFO: R package to perform causal inference for latent outcomes learned with non-negative matrix factorization with uncertainty quantification.

Lang, I., **Landy, J.M.**, and Parmigiani, G. (2025). *Bayesian Non-Negative Matrix Factorization with Correlated Mutation Type Probabilities for Mutational Signatures*. arXiv preprint [arXiv:2506.15855](https://arxiv.org/abs/2506.15855).

Zorzetto, D., **Landy, J.**, Zigler, C., Parmigiani, G., and De Vito, R. (2025). *Multivariate Causal Effects: a Bayesian Causal Regression Factor Model*. arXiv preprint [arXiv:2504.03480](https://arxiv.org/abs/2504.03480).

Landy, J.M., Basava, N. and Parmigiani, G. (2025). *bayesNMF: Fast Bayesian Poisson NMF with Automatically Learned Rank Applied to Mutational Signatures*. arXiv preprint [arXiv:2502.18674](https://arxiv.org/abs/2502.18674).

Open source software bayesNMF: R package implementing a computationally efficient Gibbs sampler for Bayesian Poisson Non-Negative Matrix Factorization (NMF) which automatically determines the number of latent factors while still quantifying uncertainties of the learned matrices.

Landy, J.M., and Parmigiani, G. (2024). *Gridsemble: Selective Ensembling for False Discovery Rates*. arXiv preprint [arXiv:2401.12865](https://arxiv.org/abs/2401.12865).

Open source software gridsemblefdr: R package for estimating local (fdr) and tail-end (Fdr) false discovery rates in large-scale multiple hypothesis testing.

Invited sessions

New England Statistics Symposium 2024
Mutational Signatures in Practice and an Introduction to bayesNMF

Contributed sessions

Joint Statistical Meetings 2025 (planned)
bayesNMF: Fast Bayesian Poisson NMF with automatically learned rank applied to mutational signatures analysis

The Bayesian Young Statisticians Meeting 2025
Mutational signatures analysis with bayesNMF: fast Bayesian Poisson NMF with automatically learned rank

New England Student Research Symposium on Statistics and Data Science 2024
Getting started with mutational signatures

Women in Statistics and Data Science 2023
Gridsemblefdr: model selection and ensembling for false discovery rates with application to differential expression analysis

Joint Statistical Meetings 2022
Gridsemblefdr: ensembling and hyperparameter optimization for supervised learning with application to false discovery rates

Poster Sessions

Cal Poly Honors Thesis Seminar

2020

Walking through an intuitive, collaborator-friendly R Shiny UI to predict hospital readmission due to sepsis in collaboration with Dignity Health.

Jupytercon

2018

Three JupyterLab Extensions for Enhanced User Experience

Tutorials and educational materials

Blog Post: [Getting Started with Mutational Signatures](#)

2024

This article introduces the biological motivation for mutational signatures, the statistical methods used, and key literature to get started in this field.

Tutorial: [Document Creation with Rmd and Quarto](#)

2023

An introduction to using Rmd and Quarto files in quantitative research. Presented at the Dana Farber Data Science workshop series.

Tutorial: [Remodel your Rmd](#)

2022

Tips for experienced quantitative researchers to boost research workflows with R package development as well as Rmd parameterized reports, websites, and customizations. Presented at the Harvard Biostatistics Student Seminar.

Textbook: [Introduction to Databases and API](#)

2020

A Bookdown and RShiny app introducing statistics students to the use of databases and APIs in R, Python, SAS, and Julia. This work is aimed at lowering technical barriers that keep statistics students from using these tools. [All materials are public on GitHub](#). Worked in a team of two advised by Hunter Glanz, PhD and Rebecca Ottesen, PhD.

Industry experience

Moderna

Cambridge, MA

Title: Computational Immunology Co-Op

July - December 2024

Manager: Roger Vargas

Key Skills: Machine learning, single-cell data analysis, Bayesian modeling, software engineering

Tools Used: Git/GitHub, Scipy, AnnData, Muon, CellRanger, AWS S3 and boto3, Docker

Applied machine learning and statistical modeling to investigate immune responses, vaccine reactogenicity, and vaccine uptake using single-cell RNA-seq, immune receptor sequencing, flow cytometry, and clinical data. Designed and documented reproducible Python tools for the team, including a `scirpy`-based package for standardized single-cell processing, a `sklearn`-based package for an in-house model selection and hyperparameter tuning framework, and a wrapper to run Cell Ranger directly in Python.

Delfi Diagnostics

Baltimore, MD

Title: Data Science Research Intern

June - August 2022

Mentor: Laurel KeeferProject: Data Visualization and Automated Reports R Software Package

Developed and documented an in-house R package for visualizations, modeling, and automated Rmd reports for use by the Data Science Research team. Followed R tidyverse style guide and used git/GitHub for version control.

Amazon Web Services

Seattle, WA

Title: Data Science Intern

June - September 2019

Mentor: Steve LoeppkyProject: Public GitHub Notebook Corpus Research Collaboration

Extracted and analyzed all Jupyter Notebooks public on GitHub to understand AWS Sagemaker and Jupyter users, their processes, and their struggles in order to inform big-picture user experience questions. Used the GitHub API and AWS EC2 and S3 instances. [All code and results are public on GitHub.](#)

Project Jupyter

San Luis Obispo, CA

Title: Software Engineering Intern

March – December 2018

Mentor: Brian GrangerProject: Developing JupyterLab extensions to enhance user experience

Contributed to JupyterLab, an open-source interactive development environment. Worked in a small team to design and implement multiple extensions, including a visualization toolkit for machine learning, an interface to view and edit keyboard shortcuts, git/GitHub integration, and a minimal extension for basic version control without needing to learn git. Participated in iterative design and user testing, and presented the work at JupyterCon 2018. *Open-source tools* [plyto](#), [jupyterlab-shortcutui](#), [jupyterlab-git](#), and [easygit](#).

Teaching experience**Tutor, Biostatistics Department, Harvard**

2021 – 2024

Tutored one-on-one and group sessions for the Biostatistics Ph.D. Core Coursework: Probability, Inference, Methods, Data Structure, and Algorithms. Prepared lessons, answered questions, and provided resources.

Teaching Assistant, Biostatistics Department, HarvardBST 221: Introduction to Data Structures and Algorithms

2022

Taught lab section, hosted weekly office hours, and graded assignments for a PhD level course in design and analysis of algorithms.

Average student rating: 5/5

BST 201: Introduction to Statistical Methods

2021

Taught weekly lab section, hosted weekly office hours, graded assignments and exams for a Masters level course covering basic statistical techniques.

Average student rating: 4.8/5

Teaching Assistant, Statistics Department, Cal Poly

STAT 427: Mathematical Statistics

2020

Hosted weekly office hours and graded assignments for an upper-division course on the theory of hypothesis testing and its applications.

STAT 426: Estimation and Sampling Theory

2020

Hosted weekly office hours and graded assignments for an upper-division course on properties of statistics obtained from samples and asymptotics.

STAT 425: Probability Theory

2019

Hosted weekly office hours, assisted in lab section, and graded assignments for an upper-division course on the rigorous development of probability theory.

Competitions

DataFest Hackathon, UCLA

2018, 2019, 2020

ASA sponsored annual data science hackathon. In 2019, my team won the data visualization category out of ~40 student teams.

RShiny App Competition, Cal Poly Statistics Department

2020

Built an [RShiny web app for Medium data science article recommendations and visualizing article popularity](#) through web scraping and topic modeling. I won the competition and was awarded funding to attend the RStudio conference in January 2020.

Honors & Awards

Biostatistics Department, TH Chan School of Public Health

Certificate of Distinction in Teaching

2021-2022

Robert B. Reed Prize for Excellence in Biostatistics for the highest score on the written qualifying exam

2021

California Polytechnic State University, San Luis Obispo

Summa Cum Laude

2020

Graduated with Honors (Cal Poly Honors Program)

2020

Award for Contribution to the Objective and Public Image of the College of Science and Mathematics

2020

Academic Merit Award (Department of Statistics)

2020

Humanitarian Award (Department of Statistics)

2020

Dean's List and President's Honors List

2016-2020

Merit-based full-ride Frost scholarship (Cal Poly Frost Fund)

2016-2020

Service and outreach

Stat Start

2022

Volunteered teaching courses on basic statistics, R, and data analysis for Stat Start, a computational summer program for high school students.

Cal Poly College of Science and Math Student Council 2017 – 2020

This is a committee of student leaders and the Dean that serves as a line of communication between students and faculty in the college. I initiated a college-wide peer mentoring group, volunteered at the college's annual research conference, and contributed to a campaign to have faculty discuss campus climate in their classrooms. As president in the 2018 – 2019 academic year, I planned events, scheduled and ran meetings, and organized guest speakers from across campus.
